

2 in 1 Solar “Round Plate” Manual

1. How your Solar Powered Fixture works

During the day, the solar panel converts sunlight into electricity and recharges the batteries. At night, the light turns on automatically using the electricity stored during the day.

The number of hours the light stays on depends on your geographical location, weather conditions and seasonal sunlight availability.

Shadowed locations will not allow the battery to charge fully and will reduce the hour of nighttime lighting. The selected location should not be near nighttime light sources, such as porch lights, street lights or pool lights, as these may cause the solar light to flicker or turn off prematurely.

2. First time use

- If the solar panel is covered with a thin protective film, remove it before using the product.

Step1: Remove the base from the cover and press the button to activate the light.

Step2: Place the cover on the base and lock into place.

Step1

Step2

- Place the solar light in a location where it can receive a full 8 hours of sunshine to allow the rechargeable battery to reach maximum capacity.
- The switch can be left in the “ON” position and the light will turn on automatically at dusk.

3. Two ways of use are available

Usage Way 1 : mounted onto the deck / ground with screws (supplied)

Step 1 : Remove the base from the cover and Press the button to activate the light.

Step 2 : Mounted the base onto the deck / ground with screws (supplied).

Step 3 : Place the cover on the base and lock into place.

Usage Way 2 : stucked into the soft grass land (plastic earth-spike supplied)

Step 1 : Remove the base from the cover and Press the button to activate the light.

Step 2 : Replace the base and lock into place.

Step 3 : Place the plastic-earth spike into the base and then stick into the soft grass land.

4. Battery replacement

Note: this operation should be done in the morning on a sunny day. This will allow the lantern to receive a full 8 hours of sunlight so that the rechargeable battery can reach maximum capacity.

- Remove the base from the cover. (You can refer to “2. First time use”)
- Remove the battery cover by turning it counter-clockwise.
- Remove the old battery and replace with new AA size 1.2V rechargeable battery of same or greater capacity (mAh).
-----USE RECHARGEABLE BATTERY ONLY!!!
- Replace the battery cover.
- If solar panel gets dirty, the charging capacity will be reduced.
Clean panel occasionally with a soft cloth – avoid harsh detergents or solvents as these would damage the solar panel.

5. Troubleshooting and Caution

If your solar light does not operate properly at night, it may be caused by one of the following:

- Ensure that the solar lantern is in a bright sunny location and not in a shady area during the day.
- Other lights can cause flickering in a solar light or even prevent it operating.
- Check the battery in case it needs replacing: see “Battery replacement” above.

6. Note:

- Safe for outdoor use.
- Remove the battery if consumed or if the product is to be left unused for a long period of time.
